Browser privacy

Browser privacy begins with understanding where a document is processed.

Local document tools can keep file processing inside the browser.

Privacy checks should inspect network requests and downloaded files.

Browser privacy does not remove names already visible in a document.

Keep an original copy before changing document metadata or page content.

Document checks

Document checks include page order, visible text and output dimensions.

A browser can extract text from a document with a readable text layer.

Privacy claims need evidence from the specific browser and document.

Review every output document before sharing it with another person.

These synthetic research notes contain no personal information.
